About SalesCode.ai

Founded by Ex Coke business leaders, we are a Sales-Tech start-up creating the future of sales @ AI. We are already working at scale with top global companies like MARS, SHELL, RB, Coca-Cola, Colgate, Perfetti, and others across 16+ countries in Asia, Europe and LATAM

What We do

Large CPG Companies lose 12-35% of Sales daily, due to inherent human inefficiencies, and Store level gaps and opportunities every day. Even a 1-2% improvement drives Millions of $ of incremental revenue.

"Our MISSION is, to exponentially augment Sales Team's competency and intelligence with AI, to drive Sales and Execution at a speed and scale impossible to match by human efforts. Sales Teams using our AI Platform have an extraordinary and unfair advantage over others".

With our AI Platform for Sales, we are leading two technology interventions that will redefine the future of CPG sales, by eliminating human inefficiencies:

1. Augmented Intelligence of Sales Teams - with our proprietary product AI Supervisor. [Won the title of Challengers in NASSCOM AI Game Changers 2021 Compendium, for AI Implementation at Scale and Business Impact].
2. Digital RTM to transform the current 100% people-dependent RTM of consumer goods companies - with our E-B2B Platform powered by AI Sales Agent. [Winner in NASSCOM Retail Tech Challenge, judged by Business and Tech leaders from HUL, RB, Marico and other top companies]

Roles & Responsibilities:

• Should be able to run the scrum meetings and manage the assignment of tasks based on project requirements.

• Ability to interact and coordinate with Business Analysts and the development/testing team on a continuous basis.

• To check if the team has all the necessary resources to execute the development and testing activities.

• Updating the Technical Manager regularly about the progress of testing activities.

• Owning the software development process along with the Technical Manager and ensuring process execution.

• Communicate with the team to deliver the projects on time and in good quality.

• Timely work review to maintain the quality of production.

Desired Candidate Profile

• Should have a very good understanding of the overall architecture of the project, data flow and the way data are organized in the DB.

• Should have very good data skills

• Excellent Verbal and Written Communication Skills.

• Should be well-versed in the overall development/testing processes

• Should be able to have basic debugging skills and familiarity with tools like Postman, looking at logs, running queries on DBs to understand the issue and getting it resolved.
